**SpicyNodes**

**Getting Started**

2. Create a new nodemap (from the Quick Links menu).
3. Give your project a title.
4. Choose a style.
5. Edit the content of your nodemap.
6. Begin by changing the text.
7. Then, add categories and subcategories using the plus sign.

8. Edit the details of each node by clicking the green “Edit details” button. It will open a drop-down menu that allows you to add images, videos, and links. You can also change the color of your text or...
9. Preview your nodemap as you work or when you're done.
10. When finished, get the URL (link), HTML, Embed code, or view the finished project live.

11. Edit the details to change the name of the project or change the ownership. You can also change the thumbnail image of your project. The URL and HTML can also be found on this page.

12. From the preview page, select “See it live,” adjust the zoom level and the size of the selected node compared to other nodes. Then, view in full screen mode to present.
