

# Downloading EndNote X7

## Windows Installation

- Login to your **myWSU** account: <https://mywsu.wichita.edu>
- Under the **Student Tools** heading on the left-hand side of the screen, click on **myTools**
- Under the **General** heading on the left-hand side of the screen, click on **Download EndNote**
- Under **Windows Installation**, check to make sure your computer meets the system requirements by clicking on the link next to **System Requirements**
- Close all other programs you may have open
- Click on the [enx7inst.zip](#) button on the screen
- At the **File Download** screen, click on **Open** (this step varies depending on the browser you are using)
- **IMPORTANT:** You must first click on the [Extract All Files link](#) on the left side of the screen, or the **Extract** button in the toolbar (this varies depending upon your zip program) -- **do not** click on the **ENX7Inst** icon yet. You'll know if you miss this step because you'll be asked for a **product key**

- Follow the steps in the **Extraction Wizard**, accepting the defaults as you go
- After clicking on the **Finish** button (the final step of the **Extraction Wizard**), **now** you can click on the icon for **EndNote X7** installation – **ENX7Inst**

- If an **Open File – Security Warning** box appears, click on **Run**
- Click through the next series of screens to begin the installation
- At the **Select Installation Type** screen:
  - **Typical** will download **the top 100** styles and import filters
  - **Custom** will download **all** available styles and import filters, or just **those you select**, and requires a few additional steps in the download process
- The installation may take some time—a large number of files will be downloaded
